

Priyanka is 32, lives in Jodhpur, works at a private school. Household income ₹40–60k/month. She buys kitchen items from the local bazaar and occasionally Flipkart for bigger purchases. She's had one bad online shopping experience — ordered a pan, received a different brand, return was painful. Since then she prefers walking into a store. She discovered Gigabox through an Instagram reel of the Jodhpur kitchen store. She opens the app for the first time at 9 PM — store is closed. She has roughly 3 minutes of attention. Her three silent questions in those 3 minutes: • "What does this app actually sell — is it only kitchen stuff?" • "Is this a real store or just another app that'll disappear?" • "Can I trust ordering without seeing the product first?" If the homepage answers all three before she reaches the fold, she adds to cart or bookmarks and returns. If it doesn't — she closes the app and never comes back. Design implication: Every zone must earn her attention. Nothing on the homepage should exist purely for aesthetics or to serve returning users. She has no cart, no history, no loyalty — just curiosity and mild skepticism.

ZONE 1 — Smart Contextual Header

Elements:

- Row 1:  Jodhpur, [Neighbourhood] ▼ · · · · ·  Wishlist ·  Cart ·  Profile ·  Contact
- Row 2 (During hours):  Open Now · *App bhi. Store bhi.*
- Row 2 (After hours):  Opens at 10 AM ·

Why: Current app opens with "Store Closed" in bold white on black — a dead end that creates uncertainty before Priya has seen a single product. This header answers her first question in one line: is this real, is it open, what makes it different. "App bhi. Store bhi." communicates omnichannel positioning in three words. Operating hours are shown only after closing time — during the day they're irrelevant noise. Wishlist is added because Priya opening at 9 PM can't order but can save products and return tomorrow — turning a closed-store dead end into a deferred conversion.

ZONE 2 — Search Bar

Elements:

- Animated typing placeholder with delete effect cycling through: *Search "yoga mat" → Search "pressure cooker" → Search "cricket bat" → Search "air fryer"*
- Voice search icon on right

Why: Current app shows 100% kitchen placeholders — induction, cutlery, bowl, stove, tray. Sports is completely absent from search suggestions, reinforcing the kitchen-only mental model. Adding sports prompts alongside kitchen gives sports passive visibility without any layout

change. The typing animation feels alive and educates Priya on catalog breadth in the first 10 seconds.

ZONE 3 — Category Tabs

Elements:

- [**All**] [🔍 Kitchen] [🏹 Sports]
- All selected by default
- Equal visual weight across all three tabs

Why: Current app defaults to Kitchen tab in bold — Sports appears secondary and de-emphasised. A first-time Priya immediately assumes this is a kitchen-only app. Selecting All by default ensures both categories are visible on first load without Priya making any choice. Neither category dominates.

ZONE 4 — Hero Banner + Animated Value Ribbon

Elements:

- Alternating lifestyle banners — manually swipeable, not auto-rotating:
 - Banner A: Indian woman cooking in a warm kitchen · CTA: "Shop Kitchen"
 - Banner B: Person playing cricket / fitness activity · CTA: "Shop Sports"
- Dot indicators below: Multiple dots, active = dark navy, inactive = grey
- Animated scrolling ribbon immediately below banners, continuous loop: ✓ You get what you see · 🛵 60 mins delivery · 🔄 Buy online. Return in store · ✓ You get what you see...

Why: Two banners instead of one because both categories need above-fold visual representation — a kitchen-only hero would reinforce the existing imbalance. Manually swipeable instead of auto-rotating because auto-rotation causes banner blindness — users scroll past before they register what they saw. Priya controls the pace. The animated ribbon below solves the problem of communicating multiple value propositions without consuming hero space — three promises always visible, scrolling continuously, impossible to miss. Current banners communicate policies in static text. This communicates the same information with motion and energy at a fraction of the visual cost.

ZONE 5 — Aspirational/Intent Selling: Kitchen

Elements:

- Section label: *"Complete your kitchen setup"*
- Horizontal scroll, 4 product cards: Pressure cooker · Tawa · Dinner set · Water bottle

- Each card: Brand name · Product name · Star rating · Price · + icon
- "View all →" in yellow

Why: Current Recommended section shows 3 nearly identical pressure cooker variants side by side — no curation logic visible to Priya. It looks like a catalog dump, not a recommendation. Replacing with varied subcategories communicates kitchen catalog breadth in one row. The section label sells intent, not inventory — Priya isn't buying a pressure cooker, she's buying "Complete your kitchen setup." This is Intent-Based Discovery — curated use-case collections that reduce browsing effort while increasing engagement, cross-sell opportunities, and conversion rates. Aspiration drives the tap, product delivers the conversion. The + icon replaces the large ADD button — on a discovery surface the goal is to explore, not immediately purchase.

ZONE 6 — Intent Selling: Sports

Elements:

- Section label: *"Get ready to play"*
- Horizontal scroll, 4 product cards: Cricket bat · Yoga mat · Badminton racket · Sports bottle
- Each card: Brand name · Product name · Star rating · Price · + icon
- "View all →" in yellow

Why: This is the most critical new addition to the homepage. Sports inventory is currently invisible to every first-time user — all 12+ category tiles, all search prompts, and all brand logos on the default homepage are Kitchen only. This zone makes sports products visible without Priya tapping anything — no navigation required, no deliberate exploration needed. The label "Get ready to play" sells the intent and the feeling, not just a list of products. Priya who came for kitchen discovers Gigabox has a strong sports catalog too — purely through passive exposure. Intent-Based Discovery Rails work here exactly as in Zone 5 — the use-case framing reduces decision effort and increases the probability of a first tap into a category Priya didn't plan to explore.

ZONE 7 — Nearby Stores

Elements:

- Section label: *"Gigabox stores near you"*
- Pill filters: [All] [📍 Kitchen] [🏃 Sports] — All default

- Store cards showing:
 - Store name + category badge (Gigabox Kitchen Store / Gigabox Sports Store)
 -  Distance (e.g. 2.3 km away)
 -  Open till 9:30 PM /  Opens at 10 AM
 - [ Directions] [ Call Store] [ Browse In-Store Picks]
- CTA at bottom: "Find all stores →" — links to Stores tab in bottom nav

Why: Gigabox's physical store is its single biggest differentiator over Amazon and Blinkit. Currently it's displayed as a passive photo gallery — no distance, no hours, no action button. Priya doesn't even know the store is 2.3 km from her home. This zone converts the passive gallery into an active trust mechanic. Showing both Kitchen and Sports stores with All selected by default gives both categories physical presence simultaneously — we don't know Priya's preference yet, so we don't force a choice. The pill filter lets her self-select if she wants. "Find all stores" connects homepage to the dedicated Stores tab seamlessly.

ZONE 8 — Value Section: Handy Buys Under ₹999

Elements:

- **VALUE** pill label above section header in green
- Section label: "Handy buys under ₹999"
- Sub-label: "Trending in Jodhpur" in green
- Horizontal scroll, 4 product cards mixed across kitchen and sports: Silicone Spatula Set ₹299 · Nonstick Fry Pan ₹549 · Skipping Rope ₹199 · Sports Bottle ₹399
- Each card: Brand name · Product name · Star rating · Struck-through original price · Discount % · + icon
- "View all →" in yellow

Why: Priya earns ₹65-85k/month. She will not risk ₹1,500 on a brand she just discovered 3 minutes ago. A ₹199 skipping rope or ₹299 spatula is a zero-risk first purchase. Once she trusts Gigabox with a small order, the ₹1,195 pressure cooker becomes easy. The VALUE label and discount % make the saving visible at a glance. "Trending in Jodhpur" adds local social proof — Priya feels her neighbours are already buying these, not just an algorithm picking random products. Mix of kitchen and sports ensures both categories get value-entry exposure.

ZONE 9 — Trust Strip

Elements:

- Full-width dark navy strip
- 5000+ verified buyers · Easy Returns · Genuine Products · 20k+ Products sold ·
- White text, single scannable line

Why: Current reviews are buried below the fold — Priya never sees them on a 3-minute first visit. Moving the trust strip here places social proof at the exact moment she has seen the stores are real (Zone 7) and the prices are fair (Zone 8) but hasn't committed to adding anything yet. Sequence matters: physical reality first → value second → social validation third. One line, scannable in 2 seconds, answers Priya's third silent question: "Can I trust this?"

BOTTOM NAVIGATION BAR

Elements: 🏠 Home · 📦 Categories · 🔍 Search · 🛒 Stores · 👤 Account

Stores tab — full experience:

- Pill filters at top: [**All**] [🔍 Kitchen] [🏹 Sports]
- All: Mix of Kitchen and Sports stores sorted by nearest distance
- Kitchen: Kitchen stores only by nearest distance
- Sports: Sports stores only by nearest distance
- Each store card: Store name · Category badge · Distance · Open/Closed + hours · [Get Directions] [Call Store] [Browse In-Store Picks]

Why: Gigabox's store is its moat — it deserves a permanent home in the navigation, not a scrollable card that gets buried on the homepage. Making it a bottom nav tab means it's one tap away from every screen in the app. The pill filter mirrors how a user thinks — "which Gigabox store is near me right now, kitchen or sports?" On first load All is selected — because we don't know Priya's preference yet and both stores deserve equal visibility.

Complete zone map:

Zone	Name	Core Purpose
Z1	Smart Contextual Header	Trust + omnichannel identity + wishlist
Z2	Search Bar	Catalog discovery — kitchen + sports
Z3	Category Tabs	Equal category weight
Z4	Hero + Animated Ribbon	Aspiration + value propositions
Z5	Intent Selling: Kitchen	Curated kitchen journey
Z6	Intent Selling: Sports	Sports visibility + aspiration
Z7	Nearby Stores	Physical trust + omnichannel CTA

Z8	Handy Buys Under ₹999	Low-risk first purchase
Z9	Trust Strip	Social proof before conversion
Nav	Stores Tab	Permanent store discovery
